

Job Title: Senior Software Engineer
Reports to: Chief Technology Officer
Department: Technology

Job Description

GreenLancer's mission is to accelerate the adoption of renewable energy - and we do it by leveraging technology. That means this role is a crucial piece in pushing forward our company.

As our senior software engineer, you'll work on our small team focused on developing and maintaining our application code, database, and servers; solving problems and adding new features to our platform.

At its core, our platform is a business process network; we connect solar installers (our customers) with our network of solar designers, electrical engineers, and structural engineers (our vendors). All of the work is streamlined and routed automatically to the most qualified vendors for a given job. We're a one-stop-shop for solar installers to purchase the services they need.

Many new features will be developed over the next year, and they include some of the really fun stuff we've been looking forward to. We're at a point where our base application is generating revenue, and now it's time to streamline our process further and develop exciting new features to increase engagement. As a member of our small technology team, your work will have a huge impact.

Skills and Requirements

We're looking for self-starters with full-stack experience who can jump in and solve problems right away. The technologies we use are fairly standard, and we're very interested in seeing things you've built previously using similar technologies, and hearing about problems you've solved.

- Highly-skilled software developer
- Positive attitude and great communication skills
- Excellent problem solver
- Passion to learn new things
- Bachelor's degree in Computer Science, or equivalent
- Capable of writing clean, maintainable code using modern frameworks
- Deep knowledge of software architecture principles
- Familiarity with a broad range of web technologies
- Previous experience developing software on a team

Key Technologies

- PHP and/or .NET
- MySQL and/or SQL Server
- JavaScript (React)

- Git
- Linux
- AWS and/or Azure

About GreenLancer

Founded in 2013, GreenLancer has helped over 150,000 homeowners and businesses go solar by connecting solar installers with specialty service providers on our web-based marketplace. Our mission is to accelerate the adoption of renewable energy by making solar installers more efficient and reducing barriers to solar expertise. In 2018, GreenLancer launched a telecom division (G-force Platform) that is accelerating the deployment of 5G and wireless communications.

We are an equal employment opportunity employer. All qualified applicants will receive consideration for employment without regard to race, color, religion, gender, national origin, disability status, protected veteran status or any other characteristic protected by law.
